Password Construction Guidelines

1. Overview

Passwords are a critical component of information security. Passwords serve to protect user accounts; however, a poorly constructed password may result in the compromise of individual systems, data, or the JSU network. This guideline provides best practices for creating secure passwords.

2. Purpose

The purpose of this guidelines is to provide best practices for the created of strong passwords.

3. Scope

This guideline applies to employees, contractors, consultants, temporary and other workers at JSU, including all personnel affiliated with third parties. This guideline applies to all passwords including but not limited to user-level accounts, system-level accounts, web accounts, e-mail accounts, screen saver protection, voicemail, and local router logins.

4. Statement of Guidelines

All passwords should meet or exceed the following guidelines

Strong passwords have the following characteristics:

- Contain at least 8 alphanumeric characters.
- Not contain more than two consecutive letters from your first or last name.
- One of each the following 4 categories:
 - Uppercase letter.
 - Lowercase letter.
 - Number (for example, 0-9).
 - Special character (for example, !\$%^&*()_+|~=-\`{}[]: ";'<>?,/).

Poor, or weak, passwords have the following characteristics:

- Contain less than eight characters.
- Can be found in a dictionary, including foreign language, or exist in a language slang, dialect, or jargon.
- Contain personal information such as birthdates, addresses, phone numbers, or names of family members, pets, friends, and fantasy characters.
- Contain work-related information such as building names, system commands, sites, companies, hardware, or software.
- Contain number patterns such as aaabbb, qwerty, zyxwvuts, or 123321.
- Contain common words spelled backward or preceded or followed by a number (for example, terces, secret1 or 1secret).
- Are some version of “Welcome123” “Password123” “Changeme123”

You should never write down a password for storage or display, (i.e on your monitor, keyboard, or desktop). Instead, try to create passwords that you can remember easily. One way to do this is create a password based on a song title, affirmation, or other phrase. For example, the phrase,

"This May Be One Way To Remember" could become the password TmB1w2R! or another variation.

(NOTE: Do not use either of these examples as passwords!)

Passphrases

Passphrases generally are used for public/private key authentication. A public/private key system defines a mathematical relationship between the public key that is known by all, and the private key, that is known only to the user. Without the passphrase to unlock the private key, the user cannot gain access.

A passphrase is like a password in use; however, it is relatively long and constructed of multiple words, which provides greater security against dictionary attacks. Strong passphrases should follow the general password construction guidelines to include upper and lowercase letters, numbers, and special characters (for example, WeAreSmartWeAreGreatWeAreTheClassOf88!)

Managing Multiple Passwords

Users who must remember a large number of accounts and passwords may wish to consider using a password manager program that stores the account/password as encrypted data. For more information regarding this, please contact the Technology Support Center.

5. Policy Compliance

5.1 Compliance Measurement

The JSU Information Security (Infosec) team will verify compliance to this policy requiring strong passwords through various methods, including but not limited to, periodic walk-thrus, video monitoring, business tool reports, internal and external audits, and feedback to the policy owner.

5.2 Exceptions

Any exception to the policy must be approved by the Infosec team in advance.

5.3 Non-Compliance

An employee found to have violated a policy requiring strong passwords may be subject to disciplinary action, up to and including termination of employment.

6 Related Standards, Policies and Processes

None.

7 Definitions and Terms

None.
